PROFESSIONAL SUMMARY

PLC Programmer / Controls Engineer with hands-on experience in industrial automation, EPMS (Electrical Power Monitoring Systems), and SCADA-based control systems. Strong background in PLC programming, Ignition SCADA configuration, electrical panel commissioning, and industrial communication protocols including Modbus TCP/RTU and Ethernet/IP. Proven ability to support commissioning, troubleshoot control systems, and collaborate with multidisciplinary engineering teams.

EDUCATION

Master of Science in Electrical Engineering

Aug 2023 – May 2025

University of South Florida (USF), Tampa, FL

Cumulative GPA: 3.54

Bachelor of Engineering in Electronics and Communication Engineering

Aug 2017 – May 2021

Rajalakshmi Engineering College (REC), Tamil Nadu, India

Cumulative GPA: 3.36

SKILLS

PLC & Controls: Allen-Bradley PLCs (Micro850, CompactLogix), Siemens S7-1200, RSLogix 500/5000, TIA Portal, Connected Components Workbench

SCADA / HMI: Ignition SCADA, FactoryTalk View ME, PanelView, Wonderware InTouch

Industrial Communication: Modbus TCP/RTU, Ethernet/IP, Profinet, OPC UA

Electrical & EPMS: Electrical panel Configuration, power meters, trip units, generator meters, utility meters

Networking: IP addressing, serial communication, Ethernet (RJ45) cabling

Simulation & Tools: Factory I/O, MATLAB/Simulink, AutoCAD Electrical

Programming: Python, C, MATLAB **Certifications:** OSHA 30-Hour Construction, NFPA 70E

RELEVANT EXPERIENCE

EPMS Controls Technician, JSET Automated Technologies

Oct 2025 – Present

- Supported commissioning of Electrical Power Monitoring Systems (EPMS) across electrical panels by verifying voltage, current, power, and energy measurements.
- Configured and troubleshoot Ignition SCADA applications, including HMI graphics, tag configuration, alarm setup, and real-time data validation.
- Implemented and validated Modbus TCP/RTU communication between power meters, protection devices, and SCADA systems.
- Installed and configured **industrial network switches** for connectivity between electrical panels and data hall infrastructure.
- Performed network configuration, including IP addressing, serial port setup, and Ethernet (RJ45) connectivity testing.
- Collaborated with commissioning and field engineers to troubleshoot communication, metering, and visualization issues during site commissioning.

Graduate Teaching Assistant – Automation & Controls, University of South Florida

Jan 2024 – May 2025

- Conducted hands-on laboratory sessions in PLC programming, ladder logic, and HMI development.
- Configured and troubleshoot Allen-Bradley and Siemens PLC systems integrated with sensors, actuators, and SCADA platforms.
- Supported robotics and automation demonstrations using ABB RobotStudio and PLC-controlled systems.

Control Systems Engineer (Training & Projects), AGIIT | Chennai, India

Jun 2021 – Dec 2022

- Programmed and tested Allen-Bradley and Siemens PLCs for industrial automation applications.
- Designed HMI screens and integrated PLCs with SCADA systems for real-time monitoring and control.
- Worked with industrial communication protocols including Ethernet/IP, Modbus, and Profinet.
- Assisted with electrical panel wiring, I/O testing, commissioning support, and troubleshooting.

KEY PROJECTS

Height-Based Sorting System (Siemens S7-1200, Factory I/O)

- Developed PLC ladder logic to automate height-based sorting using sensors and actuators.
- Performed virtual commissioning in Factory I/O to validate control logic and system behavior.

Water Tank Automation System (Allen-Bradley Micro850, Ignition SCADA)

- Programmed PLC logic for automated fill and discharge cycles.
- Integrated PLC with Ignition SCADA using OPC communication for real-time monitoring.
